

Bins

We can meet your needs!

Engineering

Engineering is done in house, so your wishes and requirements are directed straight to the responsible person. In this way we offer short communication lines, resulting in less possible errors.

Product range

Besides our standard bin designs, we offer most customer made wishes. From a 25 kg hopper up to a 150 ton stand alone unit. The materials used can vary from carbon steel to stainless steel or a combination of both. The design can vary from single screw bins up to multiple screw bins. This all in short communication between you as client and our engineering department

Production

During production we have a constant quality check. Any possible errors or miscommunication between engineering and workfloor can be eliminated on a quick and efficient manner minimizing any possible delay.

Quality control

All bins are checked before shipment to secure you receiving a quality without any surprises

Transport

We arrange transport from our factory to your address. The experience our logistics partners have against competitive rates allows you to spend your valuable time on your core-business.

Installation (optional)

If required we can do the installation on site. We have the right people in our organization to execute the job. Years of experience make them the experts!

MAVITEC
